

## **WOOD**

### **PROTECTION**

Arita Wood Protection is a water and oil protection for all types of wood.

.

---

AritaWood Protection is water based and created with a state of the art technology which repels water without altering the natural appearance of the surface. Used as extra protection against rot on damp-exposed surfaces and cut end on cladding. Arita Wood Protection protects against moisture-exposed areas above ground, making the product versatile and easy to use, both indoors and outdoors.

**AREAS OF USE:** All types of wood such as pine, spruce, oak, larch, hardwood and garden furniture.

**APPLICATION:**The surface must be clean and dry. The product is ready to use and should not be diluted. Apply Arita Wood Protection with brush, roller or low-pressure sprayer. Wipe off an excess after application with a sponge or lint-free rag/cloth. Only apply Arita Wood Protection to already pressure impregnated and similar treated wood after a 6-8 months period. Before painting or stain, wait maximum 2 hours after application of Arita Wood Protection.

Curing time is min.24 hours. Full effect is achieved 48 hours after application of the product. Application temperature above 6 degrees is recommended.

**CONSUMPTION:** 6-8 m<sup>2</sup>/L

**FEATURES:** Water based emulsion. Does not change the appearance of the surface after application.

**STORAGE:**Store in original container and in a frost-free environment.

**SAFETY:**Avoid contact with skin or eyes. Wear gloves and safety glasses. Keep out of reach of children. Ensure adequate ventilation when spraying. Rinse with water in case of contact with eyes. If swallowed drink large quantities of water and seek medical advice.
